Dedicated to glamour and well-being of all women around the world

SOLIDEA by Calzificio PINELLI, a leading manufacturer of graduated compression stockings and tights, dedicates this catalogue to all women of the world. SOLIDEA, an acronym for solar idea, introduces you to a world that is full of life, well-being and energy, the driving forces behind our existence. An inspiration by Enzo Pinelli for the health and well-being of women, and especially, of women's legs. Today, while the mainstream focuses on seeking after a model that is always new and fleeting, SOLIDEA would like to interpret timeless fashion, inspired by the well-being of your legs. Well-being embodies the basics of prevention, for the purpose of therapeutic actions with optimum solutions developed, tested and produced with total respect for women's health. SOLIDEA shows women how to attire their legs with increasing glamour and even more well-being.

SOLIDEA by Calzificio PINELLI is totally controlled by the Pinelli family which suggests its strategies for constant and ongoing growth. Thanks to an efficient customer service and a widespread network of business partners and agents, SOLIDEA can currently be found in more than 70 countries throughout the world and in more than 15,000 retailers in Europe, always offering unparalleled quality.

SOLIDEA The glamour of well-being is a certified CE marking.

Premium quality materials, cutting-edge manufacturing processes, constant product quality controls, efficient and innovative customer service: with these characteristics, SOLIDEA products offer trend-setting solutions that greatly understand the expectations of the most attentive, demanding international customers.

ISO 9001 Certificate

Calzificio Pinelli has the **ISO 9001** certificate guaranteeing an exclusive line of stockings and tights with particular performing features according to special requirements and the **ISO 13485** certificate, being all the products Class I medical devices. Furthermore, the Solidea products are **US FDA** approved.

OEKO-TEX Certificate

All products in the SOLIDEA collection have the **OEKO-TEX certificate** guaranteeing the non-toxicity of the chemicals used in the dyeing process.

Write to sereni@solidea.com to request the PDF file of the OEKO-TEX® Certificate.

If necessary, you may write to our customer service to get a copy.

Innovative spirit, ongoing research and attention to the demands of a competitive and constantly evolving market have led SOLIDEA to create a **special micro-massaging three-dimensional wave fabric** with international patent protection. This micro-massaging fabric, created for SOLIDEA stockings and tights, produces through the natural body movements **an effective micromassage on the skin, stimulating the subcutaneous microcirculation** and lymphatic drainage with a consequent qualitative improvement of the skin appearance and the body parts affected by cellulite, toning up the muscles as well and **promoting the venous return**.

A great number of further patents is also **registered at international level** by the company, and they are applied to many products such as those ones of the Solidea Therapeutic, Curvy, Wonderful Hips High-Waist Shaper and Night Wellness lines.

SOLIDEA®

cod. 0603B5 *BE YOU Tonic curvy*

PREVENTIVE / **CURVY LINE**

Micro-massaging, opaque, elasticized leggings with graduated compression 15/21 mmHg. The exceptionally elastic top embraces the hips and adheres perfectly to a curvy physique with an excellent comfort fitting up to two sizes more. Particularly opaque, ideal to be worn outside. The special three-dimensional wave fabric performs a beneficial micromassage that stimulates the microcirculation and helps eliminate excess fluids through the diuresis. Breathable, it prevents the onset of bad odours. Made of a yarn containing a mineral additive FIR (Far Infrared Rays) that stimulates the body natural thermal energy, converts it into infrared rays and sends it back to the skin tissue with a pleasant temperature-control effect. Thighs, buttocks and abdomen improve in tone and appearance. With gusset and flat seams. With antimicrobial treatment. The device is intended for the management and alleviation of the venous and lymphatic return to prevent one or more disorders of circulation (e.g. oedema, deep vein thrombosis (DVT), varicosis, lymphedema). The device is intended as a help in treating the orange peel appearance (cellulite), in treating lipoedema and during daily and sports activities.

PREVENTIVE / **CURVY LINE**

Shaping, opaque leggings with a graduated compression of 15/21 mmHg. The device is intended for the management and alleviation of the venous and lymphatic return to prevent one or more disorders of circulation (e.g. oedema, deep vein thrombosis (DVT), varicosis, lymphoedema). Exceptionally elastic, they slim the whole figure, embrace the hips and adhere perfectly to the body with an excellent comfort fitting up to two sizes more. Ideal to be worn outside and for daily and sports activities, with an excellent comfort and an elegant look. The antimicrobial bamboo yarn makes the leggings extraordinarily soft and pleasant to the touch, allowing perfect transpiration and thermoregulation of the skin, that is kept fresh and dry. With gusset and flat seams.

cod. 0547A5 *Free Legs Bands*

PREVENTIVE / CURVY LINE

Elastic anti-chafing bands with micro-massage effect protecting the inner thigh. They prevent skin redness and annoying irritations caused by repetitive thigh chafing. Thanks to the special fabric with three-dimensional waves, they exert a gentle and effective micromassage on the skin while toning up and shaping the thighs. They have special edges with an anallergic hold-up silicone elastic especially suitable for persons who suffer from allergies. Made of silver ion bacteriostatic yarn that impedes bacterial growth and prevents the onset of bad odors, keeping the skin fresh and rested even after several wearing hours. Ideal to be worn during summer under skirts and clothes.

70 den tights with an exceptionally elastic top that embraces the hips and adheres perfectly to your flowing forms with an excellent comfort and a perfect wearability that adapts to more than 2 sizes over your ideal weight. The waistband is not too tight and does not mark, thanks to the special elastic band that adheres perfectly to your body and does not cause allergies. 70 den tights with graduated compression 12/15 mmHg, opaque and elegant and with smooth knit, improve the circulation and bring relief to the legs for a correct prevention of the venous insufficiency. The infrared ray yarn contains a mineral additive that, stimulated by the body natural thermal energy, converts it into FIR infrared rays and sends it back into the skin tissue with a pleasant temperature-control effect. This action, along with graduated compression, helps to reduce cellulite and enhance microcirculation. To obtain the aesthetic effects of this yarn we recommend to wear these tights 70 every day for at least 8 hours a day. Hygienic cotton gusset, flat stitching and antistress insole. With antimicrobial treatment.

Silver Wave Top Curvy **NEW**

PREVENTIVE / CURVY LINE

Compression top made of micro-massaging fabric with sleeves to elbow, suitable for a curvy physique with particular comfort fitting up to two sizes more. The medical device is intended for the management and alleviation of the lymphatic return and to prevent one or more disorders of the lymphatic circulation (e.g. lymphoedema). The micro-massaging fabric allows the drainage of fluids in armpit, abdomen and back for smoother, firmer skin. The top is easy to be worn and, thanks to its wrapping shape, fits comfortably the chest with positive benefits on posture. It is made of a bacteriostatic yarn with silver ions, that due to their unique characteristics counteract the bacteria proliferation and prevent the onset of unpleasant odours. It is very important to choose the proper size according to the relevant size chart.

Wonderful Hips Shaper High Waist 70 opaque

PREVENTIVE / SHAPING TIGHTS

closed toe

Finally! Modelling tights made of Infrared Ray yarn with a high waist top that adheres perfectly to your body and sits below the breast, without rolling over or triggering allergies. Thanks to the special elastic bands that compose it, the top helps with posture, slims up hips, pleasantly supports the buttocks and shapes your waist for a perfect silhouette that compliments the forms of your body. 70 den tights with graduated compression 12/15 mmHg, opaque and elegant, with smooth knit, improves the circulation and brings relief to legs for the correct prevention of venous insufficiency. The infrared ray yarn contains a mineral additive that, stimulated by the body's natural thermal energy, converts it into FIR infrared rays and sends it back into the skin tissue with a pleasant temperature-control effect. This action, along with graduated compression, helps to reduce cellulite and enhance microcirculation. To obtain the aesthetic effects of this yarn we recommend wearing these tights every day for at least 8 hours a day. Features hygienic cotton gusset and flat stitching, and made with antimicrobial treatment.

Night Wellness 70 opaque

PREVENTIVE / SHAPING TIGHTS

open toe

12/15 mmHg graduated compression infrared-ray stockings specifically designed to be worn during nocturnal sleep. The self-supporting flounce tops are made using the latest generation of silicone elastomer, which is much more tolerable than traditional silicone. Graduated compression aids the physiological reduction of leg girth during sleep, with an improvement of size reduction. Made with yarn containing a mineral additive that, stimulated by the body's natural thermal energy, converts it into FIR (infrared rays) and sends it back into the skin tissue with a pleasant temperature control effect. This action, along with graduated compression, helps tone up the skin and maintain smooth and velvety skin. Enriched With antimicrobial treatment. Wearing these good looking stockings, constantly helps you get up in the morning in top form and with more slender legs.

The device is indicated for the management and alleviation of venous and lymphatic return, to prevent one or more circulation disorders (eg. Edema, deep vein thrombosis (DVT), varicosis, lymphedema). High comfort and elegant look are guaranteed! The 3-layer knit fabric forms a sandwich effect: inside polyamide and elastane yarn, while bamboo yarn outside and inside directly in contact with the skin, producing a pleasant feeling as if the socks were entirely made of bamboo yarn. This special weave creates a "micro-environment" in the fabric, allowing transpiration and thermoregulation and maintaining the skin dry. The knit texture is light and makes it particularly suitable for the warmer season. With invisible linked toe.

Socksforyou Silk&Bamboo Comfy

PREVENTIVE / KNEE HIGH

Unisex 8/12 mmHg graduated compression mid-calf socks made of precious silk and bamboo yarns, with separate toes. The device is intended for the management and alleviation of the venous and lymphatic return to prevent one or more disorders of circulation (e.g., oedema, deep vein thrombosis (DVT), varicosis, lymphedema). The 3-layer knit fabric forms a sandwich effect for an unparalleled comfort: inside in contact with the skin the pure silk yarn absorbs moisture, avoiding the bothersome wet feeling on the skin; in the middle polyamide with elastane, while outside the breathable, hypoallergenic bamboo yarn gives exceptional softness. This special weave creates a "micro-environment" in the fabric, allowing transpiration and thermoregulation and maintaining the skin dry. Toes are separated and free to move naturally, and therefore moisture between the toes is absorbed, preventing bacteria growth. Soft, comfortable support elastic and invisible linked toe. Ideal for all cases of sensitive skin and for all sports activities.

Relax Unisex 70 TRAVEL COMPANIONS

PREVENTIVE / KNEE HIGH

open toe

Finally, a relaxed knee high 70 den, graduated compression 12/15 mmHg, especially for patients with cutaneous trophic insufficiency or in case of bunions. Perfect for those who sit or stand throughout the day, the opaque rib-knit is wonderfully soft against the skin. And firm graduated compression boosts circulation to promote healthier legs and feet. A great choice for frequent travellers, too. The finely ribbed fabric is specially treated with aloe-Vera, moisturizing the skin with every step.

Leggings Maman 70 opaque

PREVENTIVE / MATERNITY

Opaque leggings 70 den in velvety microfiber, with form-fitting top for pregnant women and with soft elastic at the ankle, with graduated compression 12/15 mmHg that aids venous return and prevents its insufficiency. The form-fitting top offers an excellent support to the growing belly, thanks to the reinforced elastic band that embraces it comfortably. Made of a special yarn that, thanks to the bacteriostatic action of the silver ions it contains, keeps the biological balance of the bacterial flora, allows the natural skin transpiration and prevents the onset of bad odors.

SILVER WAVE

Fabric texture with patented threedimensional waves.

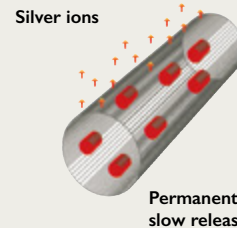

MECHANICAL MICROMASSAGE FUNCTION

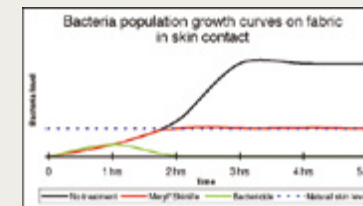

This patented high technology special wave fabric exerts an effective micromassage on the skin thanks to natural body movements. This stimulates cutaneous capillary circulation impaired by cellulite, preventing swelling (edemas) of the legs and favoring elimination of excess liquids. SILVER WAVE panties constitute a specific treatment to fight cellulite and water retention. Effectiveness and results are increased when they are worn during physical activity. SILVER WAVE line comes in various lengths to meet the needs of all women's legs. Clinical tests have demonstrated the effects from wearing SILVER WAVE panties, confirming quick results in terms of tissue tone and reduction of the "orange peel" effect.

SILVER WAVE products are totally hygienic. SOLIDEA guarantees these characteristics with its customized BACTERIOSTATIC that ensures the exceptional hygiene offered by its products, SILVER WAVE products, thanks to this characteristic, can be worn as undergarments all day long.

Silver ions are permanently present in the fabric used in SOLIDEA SILVER WAVE products, maintaining long-term bacteriostatic characteristics. SOLIDEA SILVER WAVE products maintain bacterial flora at natural levels, preventing the onset of unpleasant odors.

BACTERIOSTATIC YARN
An inorganic silver-base bacteriostatic agent is inserted in the fibres and protected by a slow release system. This prevents bacteria from proliferating on fabrics. Silver ions perform their bacteriostatic function by preventing reproduction of pathogenic micro-organism (bacteria).

SILVER WAVE shorts combine effective micromassage functions with regenerating compression, stimulating cutaneous capillary circulation. The active micromassage by the fabric generates light furrows on the skin. This is a sign that the draining effect is efficient. These furrows disappear in a few hours, leaving the skin smooth and excess fluids free.

Silver Wave Abdominal Band

Silver Wave line technical information

The light compression in this soft elastic abdominal band hugs and shapes hips and abdomen and is also an excellent lower back support. The patented three-dimensional wave fabric actively micro-massages the skin, stimulates microcirculation and detoxifies the skin. Fabric is light and breathable, fits like a second skin for all-day wearing comfort and is invisible under clothing. Its real silver ions in the fibre inhibit odour and bacteria and maintain a natural skin balance.

Silver Wave line technical information

Compression bra made of micro-massaging fabric for a comfortable breast support. The medical device is intended for the management and alleviation of the lymphatic return and to prevent one or more disorders of the lymphatic circulation (e.g. lymphoedema). The micro-massaging fabric allows the fluid drainage in the breast and armpit area, for a smoother and firmer skin. The bra is easy to be worn and, being high and wrapping, fits comfortably on the breast, with additional benefits for the posture too. It has no hooks and no seams in the reinforced areas, for a highest comfort in case of breast enlargement and reduction as well. The cup fabric is very elastic and fits every breast shape and volume. The bra is made of a bacteriostatic yarn with silver ions, that thanks to their unique characteristics counteract the bacteria proliferation and prevent the onset of bad odours. Also suitable during sports activities.

It is very important to choose the proper size according to the relevant size chart.

Compression bodysuit made of micro-massaging fabric with built-in bra for a comfortable support and with sleeves to elbow. The medical device is intended for the management and alleviation of the lymphatic return and to prevent one or more disorders of the lymphatic circulation (e.g. lymphoedema). The micro-massaging fabric allows the drainage of fluids in breast, armpit, abdomen and back for a smoother, firmer skin. The bodysuit is easy to be worn and, thanks to its wrapping shape, fits comfortably on the breast and chest with positive benefits on posture. It has no seams in the bra reinforced areas, offering highest comfort also in case of breast enlargement and reduction surgery. Closure with snap buttons. The cup fabric is very elastic and fits every breast shape and volume. It is made of a bacteriostatic yarn with silver ions, that due to their unique characteristics counteract the bacteria proliferation and prevent the onset of bad odours. It is very important to choose the proper size according to the relevant size chart.

Silver Wave Slimming Sleeves

Silver Wave line technical information

Micromassage stitchless sleeves extending up to the wrist designed to fight orange-peel appearance on the arms with an innovative dorsal support that holds them up and wraps around the shoulders for perfect wearability. Natural movements by the upper limbs, thanks to the micromassage fabric, stimulate microcirculation for the purpose of an effective anticellulite action. We recommend, for best results, that these be worn every day and all day long. They can also be worn when exercising to increase their benefits. Decreasing graduated compression 15/21 mmHg from the wrist to the shoulder; helps improve venous reflux and lymphatic drainage, making these articles suitable in case of post-trauma and iatrogenic (mastectomy) lymphedema of the upper limbs. They are made using silver ion bacteriostatic yarns that ensure the natural biological balance of the skin and natural transpiration, keeping the skin healthy and protected against bad odors.

Silver Wave Slimming Sleeves PRO

PREVENTIVE / CELLULITE CONTROL

Vai alle caratteristiche tecniche della linea Silver Wave

Micro-massaging sleeves with gauntlet and 15/21 mmHg graduated compression. The device is intended for the management and alleviation of the venous and lymphatic return to prevent one or more disorders of circulation (e.g. oedema, deep vein thrombosis (DVT), varicosis, lymphoedema). The device is intended as an aid in the treatment of the orange peel appearance (cellulite). The micro-massaging fabric stimulates through the natural body movements the micro-circulation. The active micromassage exerted by the fabric leaves light furrows in the skin, that disappear after a few hours, leaving the skin. The innovative back fabric supports the sleeves, wrapping the shoulders for a perfect fit. The bacteriostatic yarn with special breathable properties maintains the skin's biological balance and counteracts the development of bad odours. Particularly suitable for lymphedema of the upper extremities.

RED WAVE

**Energy from the
Inside <-> Out**

Three-dimension wave fabric texture with infrared ray yarn

The special three-dimension wave fabric has a beneficial micromassage action that aids microcirculation and eliminates excess liquids while reducing body mass and creating a breathable and ventilated effect that prevents the onset of bad odors. The yarn also contains a mineral additive which converts the thermal energy of the human body into FIR (Far Infrared Rays), sending a pleasing temperature-control effect back to skin tissue.

The synergy of these characteristics:

- helps oxygenate cells,
- increases metabolism between blood and skin tissue,
- acts effectively against formation of cellulite,
- thighs, buttocks and abdomen improve in tone and appearance.

Red Wave line technical information

Compression model of Bermuda shorts. The special three-dimension wave fabric has a beneficial micromassage action that helps to eliminate excess liquids while slenderizing the body mass and creating a transpiring and ventilated effect to prevent the onset of bad odours. Made with yarn containing a mineral additive that when stimulated by the body's natural thermal energy, converts it into FIR (Far Infrared Rays) and sends it back to the tissue, with a pleasant temperature-control effect. The double action of the FIR with the micromassage fabric, helps reduce cellulite and improve microcirculation. Enriched with the Sanitized® hygienic function. To obtain the aesthetic effects by this yarn we recommended wearing Red Wave Bermuda every day at least 8 hours a day.

Micromassage Armbands Ccl. 1

Red Wave line technical information

Pair of 15/21 mmHg seamless armbands that extend from the arm up to the wrist, with decreasing graduated compression from the wrist to the arm. The micromassaging fabric, combined with natural movements of the arms, stimulates microcirculation for an effective anticellulite action. A supporting flounce made with a new generation of silicone elastomer, is well tolerated even by the most sensitive skins. The yarn contains a mineral additive, which is stimulated by the natural thermal energy of the body, converting this energy into FIR (Far Infrared Rays) and sending it back to the skin tissue, giving a pleasing temperature-control effect. This action strengthens the graduated compression function, stimulating correct venous and lymphatic return and acts effectively to reduce the edema. Suitable for conservative treatment of post-trauma and iatrogenic lymphedema. With antimicrobial treatment.

SILVER SUPPORT

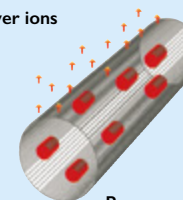

SOLIDEA, always attentive to our body's well-being and health, presents the new line of SILVER SUPPORT elastic bandages for prevention and treatment of joint pathologies: knee, ankle, elbow and wrist. The products in this new line are all made of silver ions bacteriostatic yarn. The experience accrued by SOLIDEA, which has always carried on a keen research and development activity to offer increasingly innovative and competitive products to the market. SOLIDEA has achieved an excellent marriage between the technical-structural characteristics of the weave and the premium quality raw materials, such as silver ions bacteriostatic yarn that ensures well-being and freshness.

BACTERIOSTATIC YARN

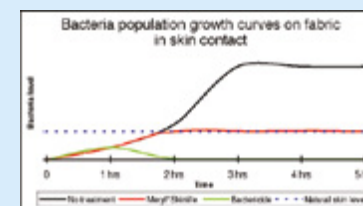

An inorganic silver-base bacteriostatic agent is inserted in the fibres and protected by a slow release system. This prevents bacteria from proliferating on fabrics. Silver ions perform their bacteriostatic function by preventing reproduction of pathogenic micro-organism (bacteria).

Silver ions

Permanent slow release

Silver ions are permanently present in the fabric used in SOLIDEA SILVER SUPPORT products, maintaining long-term bacteriostatic characteristics.

SOLIDEA SILVER SUPPORT products maintain bacterial flora at natural levels, preventing the onset of unpleasant odors.

MICROMASSAGE WEAVE

SOLIDEA has invented a new concept in graduated compression sportswear:
unique high performance sports socks

Graduated compression socks with patented micromassage fabric that activates blood circulation. The special three-dimensional wave knitted with a strong relief combines a micromassage action with ventilation improvement to ensure perfect skin transpiration, keeping feet always dry and at the right temperature in all seasons, preventing the onset of bad odors even after hours of wear. The tonic effect of the micromassage favors blood circulation to give well-being and energy. The active micromassage generated by the fabric leaves light furrows in the skin, a sign of its drainage efficiency. These disappear after a few hours and leave the skin smooth and free of excess fluids. The stocking is made of bacteriostatic yarn with silver ions that blocks the proliferation of bacteria and helps maintain the biological balance of the skin. Designed to prevent venous insufficiency and especially recommended for all sports activities, reducing cramps and protecting varicose veins. They eliminate and forestall formation of lactic acid and its graduated compression avoids useless energy losses. For best wearability we advise to put on your socks with dry skin.

THREE ORIGINAL MODELS, MANY INNOVATIVE CONCEPTS

-  micro massage
-  bacteriostatic
-  perspirant
-  odor control
-  heat insulating

Made with our patented micro-massaging texture to provide increased compression for optimum performance. For workouts, jogging or biking, these legwarmers reduce muscle vibration which decreases fatigue while its graduated compression increases blood circulation and prevents swollen legs and ankles. Improves recovery when worn postworkout. Zipperless and seamless for a sleek fit. With antimicrobial treatment. Also recommended for upper limbs.

Solidea Active line technical information

12/15 mmHg graduated compression calf support fits from the ankle to under the knee, and is made of a three-dimensional wave, micromassage, fabric that boosts perfect skin transpiration, keeping the skin dry and at the right temperature. The active micromassage fabric, along with the graduated compression aids blood circulation, reduces muscle vibration and helps optimize performance. It is made of bacteriostatic yarn with silver ions that impedes the proliferation of bacteria, and prevents the onset of bad odours, even after many hours of use. The ultraelastic edge ensures utmost wearability and support, without being too tight. Suitable as a muscle support and especially recommended for all sports activities, it reduces cramps and forestalls formation of lactic acid.

cod. 0432A8 *Arm Care Ccl.1*

THERAPEUTIC LINE

Armband extending to the wrist, stitchless, with 15/21 mmHg decreasing graduated compression from wrist to shoulder with an innovative dorsal support that holds it up and wraps around the shoulders for perfect wearability. Can be worn on the right or left arm without distinction. Soft and comfortable thanks to a revolutionary and exceptionally elastic threedimensional fabric texture. Fits the arm perfectly. Particularly suitable in case of posttrauma and iatrogenic (mastectomy) lymphedema of the upper limbs. It is made using silver ion bacteriostatic yarns that ensure the natural biological balance of the skin and natural transpiration, keeping the skin healthy and protected against bad odors. With antimicrobial treatment.

THERAPEUTIC LINE

Armband extending to the wrist, stitchless, with 23/32 mmHg decreasing graduated compression from wrist to shoulder with an innovative dorsal support that holds it up and wraps around the shoulders for perfect wearability. Can be worn on the right or left arm without distinction. Soft and comfortable thanks to a revolutionary and exceptionally elastic threedimensional fabric texture. Fits the arm perfectly. A softer fabric gusset is positioned in the hollow of the elbow for more comfortable arm movements. Particularly suitable in case of post-trauma and iatrogenic (mastectomy) lymphedema of the upper limbs. It is made using silver ion bacteriostatic yarns that ensure the natural biological balance of the skin and natural transpiration, keeping the skin healthy and protected against bad odors. Medical Gauntlet Armband Ccl. 1

THERAPEUTIC LINE

15/21 mmHg ambidextrous armband with integrated gauntlet that extends to the arm, with decreasing graduated compression from the hand to the arm. A supporting flounce made with a new generation of silicone elastomer, is well tolerated, even by the most sensitive skins. Soft and comfortable thanks to the revolutionary, and exceptionally elastic, three-dimensional fabric texture that adapts perfectly to the limb. The graduated compression stimulates correct venous and lymphatic return and acts effectively to reduce the edema. Suitable for conservative treatment of post-trauma and iatrogenic lymphedema. With antimicrobial treatment.

Micromassage Gauntlet Ccl. 2

Elastic-compression ambidextrous gauntlet for conservative and therapeutic treatment of hand and forearm lymphedema. The special patented micromassage wave fabric aids microcirculation. The strong graduated compression 25/32 mmHg stimulates correct venous and lymphatic return and acts effectively to reduce the edema. The micromassage wave fabric permits natural transpiration, letting the skin breathe and keeping it dry and protected. It can be worn both alone and combined with an elastic-compression armband. With hygienic Sanitized® function.

SOLIDEA®

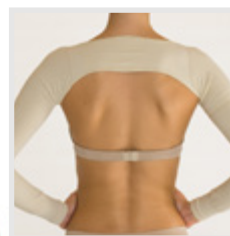

cod. 0433A5 *Silver Wave Slimming Sleeves*

THERAPEUTIC LINE

Micromassage stitchless sleeves extending up to the wrist designed to fight orange-peel appearance on the arms with an innovative dorsal support that holds them up and wraps around the shoulders for perfect wearability. Natural movements by the upper limbs, thanks to the micromassage fabric, stimulate microcirculation for the purpose of an effective anticellulite action. We recommend, for best results, that these be worn every day and all day long. They can also be worn when exercising to increase their benefits. Decreasing graduated compression 15/21 mmHg from the wrist to the shoulder; helps improve venous reflux and lymphatic drainage, making these articles suitable in case of post-trauma and iatrogenic (mastectomy) lymphedema of the upper limbs. They are made using silver ion bacteriostatic yarns that ensure the natural biological balance of the skin and natural transpiration, keeping the skin healthy and protected against bad odors.

Anti-Trombo Extra Extra Large

MEDICAL

inspection opening

Stockings up to the groin (AG) with silicone hold-up band and 15/18 mmHg compression to prevent deep venous thrombosis (DVT) and pulmonary embolism (PE) for subjects with body mass index (BMI) greater than or equal to 30. The reinforced silicone band does not roll up allowing a perfect wearability even on especially voluminous limbs with relaxed tissues. Suitable for surgical operations, during birth, prolonged bed stays, neurological and multitrauma patients. The elastic compression reduces venous volume and increases flow speed at equal venous capacities, reducing stasis which is a key factor in deep venous thrombosis (DVT). A special three-dimensional knitted fabric makes these stockings soft and comfortable and easy to wear. They are made with bacteriostatic yarn which, thanks to the presence of silver ions, blocks the proliferation of bacteria to ensure maintenance of the biological balance of the skin. These stockings maintain their characteristics when undergoing washing up to 80°.

MEDICAL

Graduated compression stay-up stockings with patented micromassage fabric to give well-being and energy. The special three-dimensional weave, knitted with a strong relief wave, assure a micromassage action together with perfect transpiration, keeping the skin constantly dry and at the right temperature in all seasons, preventing the onset of bad odors even after many hours of wear. The active micromassage generated by the particular fabric leaves light wavy furrows on the skin, a sign of its drainage efficiency that will disappear after few hours and leave the skin smooth and free of exceeding fluids. The stockings helps maintain the biological balance of the skin. With a special, non-allergenic, hold-up elastic edge, designed especially for those who are allergic to silicone.

High waist, form-fitting and comfortable leggings with hygienic opening, particularly suitable for post-operation periods. Graduated compression 18/21 mmHg and our patented micromassage three-dimensional wave fabric exercise an effective massage, stimulating blood circulation and facilitating absorption of swelling and bruises. Skin tissues gradually return to normal and recovery is correct without formation of relaxation or blemishes. The special silver ion bacteriostatic yarn hinders proliferation of bacteria, prevents the onset of bad odors and maintains the natural balance of the skin.

cod. 052670 *Diabetic Knee-High*

MEDICAL

closed toe

Knee-highs made with a very fine weave that makes the fabric extremely soft, lightweight and breathable, with a slight compression that makes the stocking adhere well to the leg. Toe stitching is done specifically outside the stocking so the fabric inside that is in contact with the foot, is flat, smooth and soft, to avoid friction that may injure the skin. Made of COOLMAX® quick drying yarn to keep the skin of the foot, and the limb, cool and dry, thanks to excellent, body moisture management. Perspiration is conveyed outside for optimal comfort, maintaining prolonged freshness together with excellent breathability. The characteristics of this knee-high sock are suitable for diabetics with peripheral arteriopathy and/or neuropathy, in primary or secondary prevention and for non diabetics with fragile skin. The Diabetic knee-high sock does not replace the knee-high sock or the elastic stocking in patients with venous disease nor the "anti-thrombus" stocking in operated patients or undergoing operation.

How to determine the proper size

PREVENTIVE
MATERNITY
CELLULITE CONTROL

SIZE	WEIGHT IN KG
1 - S	45 - 52
2 - M	52 - 62
3 - ML	62 - 72
4 - L	72 - 84
4XL - XL	84 - 105
5XXL - XXL	105 - oltre

When you select a size and your weight / height ratio is well proportioned then the "WEIGHT" factor is more important than the "HEIGHT" factor. The size / weight correspondence is as follows:

We recommend, to choose the most appropriate size, that you refer to the following table where the various sizes are defined according to a ratio between height in centimeters (HEIGHT CM) and weight in kilograms (WEIGHT KG).

If, for example, we consider a person who is 163 cm tall and weighs 60 kilograms, then we calculate as follows:

- we find the corresponding height on the column at the left of the table (HEIGHT CM). In this case 163 cm is a height between 160 and 165 cm
- we look for the corresponding weight in kg on the top of the table (WEIGHT KG). In this case we consider the box that reaches up to 60 kg
- the recommended size is found at the intersection between the column that corresponds to weight and the line that corresponds to height. In our example the size is 2 or M (medium).

SOLIDEA's therapeutic stockings are made using high-tech and innovative yarns that maintain extraordinary elasticity with the passage of time. These features have revolutionized the concept of therapeutic stockings up to now on the market.

- The weight / height ratio table can be used to select the right size for limbs that are not particularly edematous (not too swollen).
- For swollen limbs you must refer to the circumference table. In this case measure limb circumferences at the points described above.

How to determine the proper size

SOLIDEA THERAPEUTIC
TIGHTS
STOCKINGS
SINGLE-LEG TIGHTS

KNEE-LENGTH STOCKINGS →

To obtain maximum benefit from the stocking the leg must be correctly measured: for this purpose, technical or specialist assistance is recommended. The measurements should be taken preferably in the morning when the legs are less edematous.

MEASUREMENTS TO BE TAKEN:

- Circumference of the ankle (c B), at the narrowest point. This is the point of maximum pressure.
- Circumference of the leg at the highest point reached by the stocking; depending on the model, this will be:

stockings reaching the groin: the circumference at the point just below the groin (c G)

Half way up the thigh: the circumference at the point half way between the groin and the knee (c F)

knee-length stockings: the circumference at the point just below the knee (c D)

- The length must be measured from the base of the foot (a) to the highest point reached by the stocking, and it will be, therefore:

(I G) for tights and for stockings up to just below the groin;

(I F) for stockings reaching half way up the thigh;

(I D) for knee length stockings.

ARTERIAL PULSE

Blood circulation

In that perfect machine that is the human body the cardiovascular system functions thanks to the heart that pumps blood, oxygenated by the lungs, into the arteries.

In their turn the veins carry oxygen-depleted blood back to the heart from outlying zones.

Capillaries, the smallest vessels in our body, are located between the end of an artery and the beginning of a vein. They form a dense network that creates microcirculation, with the function of having all the oxygen and substances necessary for their health to permeate into the cells.

Veins in the lower limbs may be located near the surface (surface or supra-fascial veins) or in depth (deep veins, sub-fascial, in muscular interstices).

One-way valves, or venous valves are built into the wall of the venous system to help blood flow towards the heart where this is most necessary, where the blood flow is most difficult and to prevent blood from flowing back down (venous reflux).

They are activated by the muscles responsible for lower limb movements and together with muscles they act to "pump" venous blood.

ABNORMALITIES IN THE CIRCULATORY SYSTEM

With the passage of time and as a consequence of incorrect habits, pregnancy, familial predisposition and hormonal problems the walls of veins may gradually dilate, losing tone and elasticity. The one-way valve system is impaired. Blood struggles to get back to the heart and tends to stagnate, especially in the distal parts of the legs (first the ankle and then the calf).

VARICOSE VEINS

These are vein dilatations that can, with time, become tortuous. The most common (truncal varicose veins) are formed near the saphenous and collateral veins. Peripheral networks can also be formed (reticular varicose veins) on the rear surface of the thighs and legs. Reticular varicose veins are often considered to be only an esthetic problem. However they can become real disturbances such as truncal varicose veins. Varicose veins, in their early stage, give a feeling of heaviness to the legs and ankles and a sensation of fatigue and tension. Then there may be swelling of the legs (edema) with night cramps. Hypodermatitis may also take place with inflammation of the subcutaneous tissue. Untreated venous insufficiency can become chronic with the presence of ulcers.

Glossary

ARTERY: blood vessel that carries blood from the heart to the organs.

VEIN: blood vessel that carries blood from the periphery of the body back to the heart. Equipped with one-way valves to prevent blood reflux.

DEEP VEIN: a vein placed between the muscles usually circulating parallel to the arteries.

SUPERFICIAL VEIN: a vein located in subcutaneous adipose tissue.

VARICOSE VEIN: permanent dilatation of a vein with regressive alteration of its walls. Blood in the varicose veins, as in all superficial veins flows up towards the heart during movement (in the lower limbs

VENOUS THROMBOSIS

This is the presence of a blood clot in the veins, often caused by slowing down of blood flow. Thrombosis can strike deep veins with the risk of pulmonary embolism. If the thrombus forms in a superficial vein (often varicose) the skin becomes red and hot, the vein is painful and hard and inelastic. Generally there are no risks of pulmonary embolism in this case. The causes of deep venous thrombosis may be varied: from blood diseases to trauma or prolonged bed rest.

ULCER

This is a lesion of the skin. It is not very painful if it is not infected and requires frequent medication, usually twice a week. Venous ulcers generally occur on the inside of the ankle and are caused by an alteration in venous circulation, sometimes accompanied by arterial insufficiency (ulcus mixtum). The most decisive cure is surgery on the saphenous vein (when efficacious), backed up by medication, physical therapy and elastic compression.

while walking, running, jumping, etc.) but with greater difficulty.

TRUNCAL VARICOSE VEIN: related to the trunk that the vein it belongs to comes from.

VARICECTOMY: surgical removal of a varicose vein.

EMBOLUS: a blood clot free to circulate in the bloodstream.

THROMBUS: a blood clot that adheres to the wall of a vessel.

TROPHIC DISORDERS: skin distress that can lead to the opening of ulcers.

ACROCYANOSIS: cyanosis or bluish coloration of the skin, persistent, painless and symmetrical on the

hands, feet or face, generally caused by cold temperatures.

ANGIODYSPLASIA: a congenital vascular malformation.

SCLEROTHERAPY: sclerotherapy is a technique that involves closure of a complete or a section of an ectatic and/or varicose vein or of a telangiectasia by injecting a solution into the vessels that causes a topical inflammatory reaction (chemical phlebitis). This reaction subsequently causes the thrombization and subsequent reabsorption of the varicose section and the telangiectasias.

[PREVIOUS](#)[NEXT](#)[INDEX](#)

Lymphatic circulation

The lymphatic system is the group of lymph nodes and lymphatic vessels involved, with their lymph exchange and transport function, in the body's immune defense system. Lymph is an effective system by which the body collects waste materials and fluids from peripheral sites and carries them to purifying organs (liver; kidneys, lungs, lymph nodes).

The thoracic duct is also part of the lymphatic system. It starts in the vicinity of the lower part of the spine and accumulates lymph from the lower limbs, pelvis, abdomen and lower chest.

LYMPHEDEMA

Among the abnormalities of the lymphatic system, the lymphedema is a syndrome of extravascular accumulation of lymph or alteration of the lymph vessel and altered lymph formation, leading to water and protein stagnation. Primarily evidenced in the upper and lower limbs, generally, in only one of the two, but it can also develop in the genital zone. The lymphedema must be distinguished from other types of edema, especially in the lower limbs, which can have different causes such as venous, heart and kidney pathologies. Primary lymphedema is congenital, whereas secondary lymphedema is caused by surgery, tumor, inflammation, radiotherapy or osteoarticular disorders in advanced stage.

UPPER LIMB LYMPHEDEMA

Generally this is consequent on axillary lymphadenectomy, sometimes followed by radiotherapy, performed in breast cancer surgery. According to various studies upper limb lymphedema occurs in from 6 to 40% of women operated at the breast and subjected to axillary lymphadenectomy, with or without radiotherapy. Lymphedemas can occur after a very short latency period of just a few days or have a very long latency period, even decades after surgery.

SYMPTOMS OF LYMPHEDEMA

1st STAGE: Occasional cramps, especially at night, tingling, sometimes itching can be confused with other pathologies.

2nd STAGE: Heaviness, cramps, itching, increasingly persistent, especially during the evening

3rd STAGE: Heaviness, strong tingling, persistent cramps, intense itching, skin tension. Difficulty in movement.

Glossary

LYMPHATIC VESSELS: these are thin vessels through which the lymph flows. The pressure from surrounding organs aids the flow of lymph.

CATABOLITES: waste products from the body, debris from demolition of proteins and amino acids.

DYSPLASIA (congenital lymphatic): abnormal cellular development in an organ or tissue, generally consisting in loss of control mechanisms with replacement of mature cells with immature cells.

EDEMA: abnormal accumulation of fluid in interstitial tissue, intercellular spaces and in cells.

FIBROLYMPHEDEMA: rigid limb with hardened subcutaneous tissue and trophic disorders (pachydermitis with indurative sclerosis and lymphostatic verrucosis).

FIBROMATOSIS: a grouping of numerous connective tissue lesions consisting of a proliferation of fibroblasts (the cells of fibrous connective tissue) and which can occur at any age and in any location.

DYNAMIC INSUFFICIENCY (or high flow rate insufficiency):

LYMPHEDEMA CARE

Precocious treatment and prevention are very important: prevention can be done by becoming aware of the problem and following some hygiene and behavioral rules. Early-stage therapy uses personalized physiotherapy and manual lymphatic drainage programs.

Unfortunately, lymphedema is a disease for which there is no cure. However it can be kept under control: after "attack" therapies the lymphedema is kept under control using elastic compression armbands or stockings and by complying with a few appropriate behavioral rules.

iciency): the lymphatic system is intact but has to cope with a protein load that is higher than its carrying capacity.

MECHANICAL INSUFFICIENCY (or low flow rate insufficiency): caused by primary or secondary damage evidencing a normal protein load.

HYPERPLASIA: a progressive biological process that leads to growth of the volume of an organ or a tissue due to an increase in the number of cells that constitute it.

HYPERTROPHY: increase in the volume of cells making up a tissue or an organ. This modification does not alter the number of cells within the tissue or organ in question but increases their size.

CHRONIC HYPODERMITIS (or stasis dermohypodermitis): this is an evolution of the chronic edema. This is a thickening with induration of subcutaneous tissues (brown dermatitis, hypodermitis, varicose eczema) due to venous stasis that causes inflammation of the subcutaneous tissue.

LYMPH: a transparent fluid containing water, proteins, salts, glucose from different tissues to blood flow.

LYMPH NODES: small organs located throughout the body and containing cells that fight infection. Lymph enters the lymph nodes through the lymph vessels, undergoes chemical changes and returns back into the lymphatic circulatory system.

LIPOEDEMA: a chronic hereditary disorder of fat distribution in the region of the thighs, legs and pelvis.

PACHYDERMIA: abnormal thickening of the skin which assumes a wrinkled appearance with coarse folds, similar to the skin of an elephant.

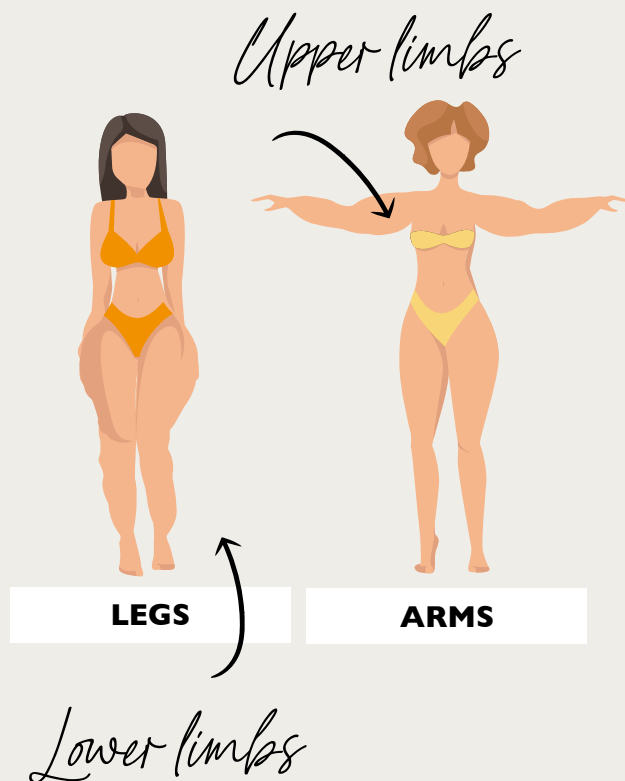

SCLEROSIS-INDUCED PACHYDERMITIS: an inflammatory process in all the layers of thickened (hypertrophic) skin with interstitial fibrous hyperplasia.

LYMPHOSTATIC VERRUCOSIS: hyperplasia of the epidermis caused by increased pressure in interstitial fluids of the dermis.

INDEX

Lipoedema

Lipoedema is a chronic, multifactorial pathology on inflammatory base and defined by symmetrical accumulations of subcutaneous fatty tissue and orthostatic oedema. It usually affects both sides of the lower body equally and sometimes the arms as well. Lipoedema can make the affected parts out of proportion with the rest of the body, while it does not develop in the feet, hands and torso.

The symptoms related to the abnormal build-up of fat are multiple and heterogeneous:

- **pain, spontaneous or caused by the slightest touch and pressure,**
- **presence of fibrous nodules in the adipose tissue,**
- **bruises which easily appear at the lightest trauma,**
- **sense of heaviness, tension, swelling in the affected limbs which appear to be extremely disposed to fatigue.**

Lipoedema predominantly affects women and only very rarely men. Women with close relatives that have lipoedema are more likely to develop it themselves. 60% of patients with lipoedema have a family-history of the disease, and this confirms there is a strong hereditary component to the disease.

Lipoedema is labelled with different types based on where the fat tissue builds up in the body and stages to evaluate the progression and severity of the condition.

Type I: fat is between belly button and hips.

Type II: fat is between pelvis and knees.

Type III: fat is between pelvis and ankles.

Type IV: fat is between shoulders and wrists.

Type V: fat is between knees and ankles.

Stage 1: homogeneous skin surface (mild lipoedema)

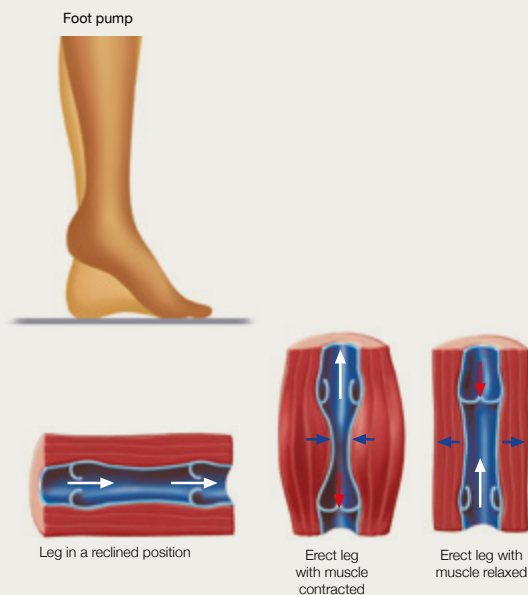

Stage 2: irregular skin surface with nodules and subcutaneous lipomas (moderate lipoedema)

Stage 3: deformities and hardening of limbs due to massive fat growth (severe lipoedema)

Stage 4: lipoedema with lymphoedema

Furthermore according to the fat distribution, lipoedema may be defined "columnar" (i.e. there is an enlargement of the lower limbs which become column-shaped or cylindrical) or "lobar" (i.e. there are large bulges or lobes of fat overlying enlarged limbs). Columnar lipoedema is much more common than lobar lipoedema.

The diagnosis of lipoedema is made on clinical grounds: there are no diagnostic tests for the condition. Then, a multidisciplinary approach to manage the lipoedema is often required, and specific laboratory and/or instrumental tests, endocrine-metabolic, lymphological, vascular and surgical assessments have to be performed according to the appropriate condition. The management of lipoedema is mandatorily poly-therapeutic and must be calibrated specifically according to the clinical needs of each single patient and aimed at minimizing symptoms in the long term.

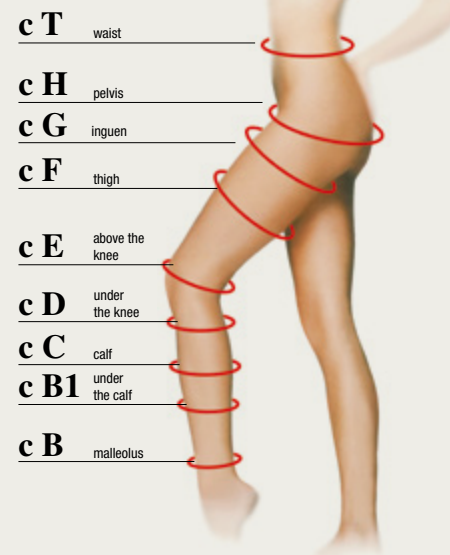

Elastic compression

The elastic compression is the most ancient treatment for varicose and lymphatic disorders and their complications. It is based on applying bandages to the limbs, effective in controlling swelling of the legs. Today, these bandages have been, in part, replaced by elastic stockings and supports that compress the superficial veins and microcirculation pushes the blood from the superficial veins into the deep venous axis which works normally. This can be explained more simply by saying that elastic compression generates a real "pump effect".

Elastic compression, or graduated compression, is the force exerted by the tights or the support to compress the limb, decreasing upwards facilitating the pump effect and helping blood and lymph circulation. Compression is measured at predetermined points and is expressed in millimeters of mercury (mmHg). The highest compression value is at the ankle, called point B in medical language. The millimeters of mercury of compression indicated on the stocking and support packages are measured at point B.

COMPRESSION POINT

Deniers

The deniers indicate the size (diameter) of the yarn used to weave the stockings and tights. The lower the denier the more the tights are light and sheer. The higher the denier the more compact, strong and resistant is the fabric, making the tights less sheer.

SOLIDEA has revolutionized this denier-transparency relationship: Ongoing research and studies, development of innovative projects, use of cutting-edge technologies and new combinations of yarns have led to unequalled softness and transparency even with very high deniers. This is why women worldwide entrust their legs and body to SOLIDEA because they have not to give up style and elegance to pursue their well-being.

INDEX

Classification of compression levels

Preventive and therapeutic stockings, tights and supports are classified, regarding compression, in compliance with Experimental European Standard UNI ENV 12718. This standard replaces the tables of EC member countries which assigned heterogeneous pressure values.

Class	mmHg	patologie
A	10-14	• predisposed persons • swollen legs • telangiectasias • mild edema
I L light	15-17 (±3)	• varicose veins • acrocyanosis • post-sclerotherapy of telangiectasias
I H strong	18-21 (±3)	• truncal varicose veins • varicose veins with substantial edema • post-varicectomy • post-sclerotherapy • arthrosis of the foot and knee
II	23-32	• post-thrombotic syndrome • during treatment of ulcers • post-trauma syndrome • angiodysplasias • deep venous thrombosis • deep venous insufficiency • reversible lymphedema • lipoedema
III	34-46	• severe edema • chronic hypodermatitis • irreversible lymphedema
IV	>49	• for all the pathologies already listed and present in their most severe form

When not to use graduated compression

Graduated compression should not be used in the presence of the following pathologies:

- arterial pathology: compression of small size arteries would further reduce blood passage, creating pain and reduced blood supply
- diabetes with neuropathy: pain of peripheral nerves following alteration of glucose metabolism
- moist dermatosis: reddened skin, abraded surface, secretion of serous fluid
- ongoing skin ulcer: not caused by venous insufficiency
- crural eczema
- disorders of arterial circulation
- Raynaud's disease: arterial pathology with damage to the artery wall

[PREVIOUS](#)[NEXT](#)[INDEX](#)

What can you do?

It is important to adopt a healthy lifestyle: do physical activities such as swimming, cycling and walking. Doctors advise consuming fruit and vegetables rich in biophlebotonics, sleeping with your feet raised, wearing appropriate clothing and avoiding tight garments that compress your abdomen or legs and wearing comfortable shoes.

But above all, to prevent or reduce the problems caused by venous insufficiency, the simplest, most practical and most important solution is to wear elastic stockings with graduated compression.

Elastic stockings, thanks to decreasing graduated compression from the ankle to the thigh, exert a beneficial massage that helps venous return and improves circulation.

It has been shown that these stockings greatly reduce the presence of evident capillaries and varicose veins and prevent the onset or the aggravation of venous diseases: they are of fundamental importance during pregnancy.

There are special models for pregnant women with a special top that expands at the waist to accommodate and support the growing belly and are also ideal immediately after birth to quickly reduce disorders tied to venous circulation and which arose during pregnancy.

A simple but highly effective measure for the well-being and health of your legs.

Elastic compression during pregnancy

Swollen feet, sore ankles, a sensation of stress .. what expectant mother does not suffer from these?

The problem is so common it has come to a foregone conclusion: it has been shown that the risk of venous insufficiency, that is weakening of the veins, increases during the nine months of pregnancy.

But it is worthwhile to know more about this, to better understand the causes and, above all, take steps to remedy the situation and help get through this important time feeling healthy and light, thinking with pleasure about "afterwards".

Pregnancy brings changes to a woman's blood circulation, both quantitatively and qualitatively. These changes may cause mild disturbances, but they can also bring out a venous disease that has remained latent up to the present.

Blood volume increases overall by 20% ever since the start of pregnancy. This is why standing increases venous stasis in the legs and slows down venous return of blood from the ankle to the heart.

Furthermore the female body secretes hormones to protect the pregnancy and keep the uterine muscles relaxed before delivery and, with a similar mechanism, also keeps blood vessels relaxed. Veins, especially deep veins, swell up and the speed of blood circulation decreases. Hence the feeling of heaviness, tension in the leg, a sensation of "electric shock", tingling and swollen feet and, in some cases, even the risk of deep venous thrombosis at the end of pregnancy.

Venous pressure in the legs increases, at the beginning primarily when standing but even when lying down during the second half of pregnancy because of the weight of the baby and the uterus on the vein structures of the pelvis. This slowing of venous return, from the periphery to the heart, causes further swelling of superficial and deep veins.

The normal composition of the blood also changes. Blood coagulation increases to protect the fetus during pregnancy and this increases the risk of venous thrombosis of superficial veins or deep veins, especially shortly before giving birth or during the puerperium.

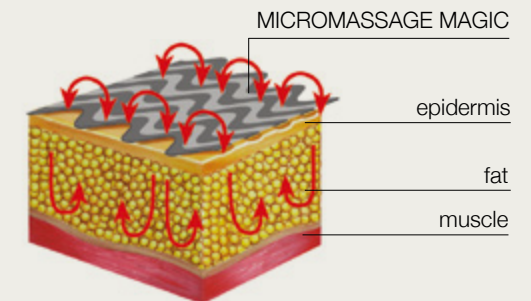

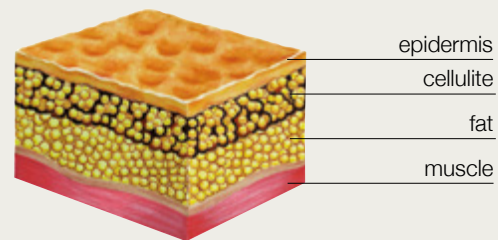

[PREVIOUS](#)[NEXT](#)[INDEX](#)

Micromassage

MICROMASSAGE MAGIC by SOLIDEA is a complete line of tights, shorts and elastic armbands which combine effective massage with regenerating compression. Clinical studies have shown that the exclusive “wave” structure of the fabric with a special three-dimensional relief knit, is effective and well-tolerated. These supports exploit the natural movements of the body, to exert beneficial and effective micromassage on the skin and on the subcutaneous tissue, to stimulate microcirculation, to prevent swelling (edemas) of the upper and lower limbs and to aid diuresis and consequent excess fluid disposal. The special breathable fabric has no side effects. It also prevents stagnation of sweat, the first cause of bad odors and irritations.

Special three-dimensional cellulite control
weave (Solidea patent)
